GLADIOLUS BULBS

Grown By

T. R. FERRIS

HUNTLEY, McHENRY CO., ILLINOIS

Lady Elgin, Originated by T. R. Ferris

GLADIOLUS CULTURE

Spade or plough the ground ten inches deep, then apply well rotted barnyard manure or pulverized sheep manure, working it into the soil with a hand rake.

Plant in rows eighteen or twenty inches apart, make a trench five inches deep, and place the bulbs two or three inches apart, in the trench and cover level full.

Plant in the spring, in May. Do not plant near trees or buildings.

CULTIVATION

Keep the soil loose by frequent hoeing, do not permit the ground to become crusted or hard, water when needed, not sprinkled, but water sufficient to reach the bulbs that are five inches below the top, then watch them grow and bloom.

CARE OF BULBS

Dig in the fall, about October or November, but do not delay long enough for the frost to reach them. Cut the stem off close to the bulb, dry in the sun a few days, then remove the old bulb that is attached to the bottom of the new bulb. Store in a dry cool place, free from frost.

TERMS—Price per doz. includes Parcel Post charges. One half doz. at the dozen rate. **No order for less than \$1.00.**

Cash with order or before shipment.

Bulbs are all first-class in every way. I sell only those grown by myself. All orders, large or small will receive my personal attention.
